LET A BED OF Gorgeous Peonies

usher in the wealth of glorious flowers summer has in store for you. Peonies, because they combine more qualities of majestic beauty and gorgeous colors than any other late spring and early summer flower, are universally suited to planting almost anywhere, and they will bring back in beauty and fragrance a big dividend on any investment you make in them.

On the lawn or among shrubbery, bunches of reddish young Peony shoots are always a welcome sight in the early spring, when we are hungry for some warm color; and after the flowers have come and gone the foliage that is left has a nice shrubby effect—clean and neat until fall.

Conspicuous qualities of Peonies are:

Hardiness, freedom of bloom, variety of striking color, usefulness as cut-flowers, fragrance and immunity from attack of insects and disease. More than this cannot be expected from any flower, and by planting this autumn you can have gorgeous blooms next May and June.

FOR BEST RESULTS, ORDER PEONIES NOW

PEONY CULTURE

Peonies will grow anywhere — reasonably speaking. They thrive in partial shade, but best results are obtained when they are planted in deep, rich soil, and have a sunny location. Plenty of water during the growing season is an added stimulus, and if liquid manure is applied at intervals of ten days, the grower will be amply repaid for his trouble in the increased size and coloring of the flowers. Winter protection is not necessary, but a light covering of manure is beneficial.

COURONNE D'OR (Crown of Gold)

AN IMPORTANT POINT

to observe in the planting of Herbaceous Peonies is not to plant too deep. The crowns should be covered with not more than 2 inches of soil. Too deep planting is a frequent cause of Peonies not flowering.

Three of the Finest

THE PEONY as a CUT FLOWER

By selection and hybridizing the Peony has now become the grandest flower save the rose and also one of the most superbly scented.

The sweet aromatic fragrance is not the least of the many attractions of this "rose without a thorn" and the magnificent blooms borne on long stiff stems make these flowers especially valuable for cutting. Customers living near cities where cut flowers are in demand will find Peonies a profitable investment as the gorgeous blooms command a good price and a dozen roots planted this Fall in rich loamy soil, 2 to 3 ft. apart, will produce flowers next May and June. If undisturbed the roots will increase in size yearly and the blooms will improve in quality as the plants get established.

Remember
Autumn is Peony planting time

Hyacinths in Separate Colors

Our Fine Selected Hyacinths in Separate Colors are good size, well-matured Bulbs, sold at low prices and specially recommended for BEDDING and also for WINTER BLOOMING in the conservatory and window garden, when the higher priced kinds are not desired. They give excellent satisfaction.

We have given these Hyacinths a thorough trial in our proving beds year after year, and we find by experience that for outside planting the best results are obtained from the single varieties.

The spikes are always clothed with well-formed florets and are generally larger than the double varieties. As many of our customers prefer the double flowers, we offer first-class, well matured bulbs of both kinds.

HOW TO GROW BEAUTIFUL HYACINTHS

In the Open Ground

They should be planted in the Fall 6 inches apart each way and 3 to 4 inches deep. Give them slight protection over Winter and they will flash forth in beautiful bright colors early in the Spring and remain in bloom some weeks. Then the Bulbs may be removed in time to set your Summer flowering plants. Or in some soils, Bulbs do well a number of years without lifting or replanting. In such beds for Summer bloom, sow quick-flowering seed of Petunias, Verbenas and Portulacas, etc.

In Pots or Window Boxes

Hyacinths potted in September may be brought to bloom by Christmas, and by successive plantings a succession of bloom may be had until Easter. Plant the Bulb in the pot so that its crown just shows, then when finished set away in a cool dark place for 6 weeks or 2 months for root growth to develop. After this bring gradually to the light, heat and air, and give plenty of water, and you will be well repaid.

In Glasses

All Hyacinths succeed well in water. If Hyacinth glasses are not available use pebbles or shells to keep the Bulbs in place and then set the Bulb so that the lower end is almost but not quite in contact with the water. It is not essential to change the water; a small lump of charcoal in the bottom will serve the same purpose. Put away in a cool dark place till you see the roots developed, then remove by degrees to full light and air.

Early Flowering Roman Hyacinths

ROMAN HYACINTHS are among the handsomest and most desirable of all Bulbs for early Winter flowering in the House or Conservatory. They begin to bloom very quickly and throw up great masses of sweet and lovely flowers almost before other bulbs get started. They are easily grown in pots or boxes; require no special treatment and are absolutely sure to bloom. Though recommended for House Culture they are quite hardy, and when planted in open ground will make an elegant display of lovely flowers very early in the Spring.

La Candeur, the Best Double Early White Tulip

Late or May Flowering Hardy Garden Tulips

These Tulips are quite distinct from the early flowering kinds—coming later they extend the blooming season two to three weeks longer, and are usually at their best about Decoration Day. They are all single. They are extremely hardy and therefore excellent for planting in the herbaceous border, among the shrubbery or for naturalizing in any place where they can remain undisturbed and bloom regularly for years. Splendid for bouquets because of their durable flowers and long stems. Set these bulbs 4 inches deep.

True Chinese Sacred Lily

THE WATER FAIRY FLOWER OR "SHIN SIN FAR"—OR CHINESE "JOSS FLOWER"

Chinese Sacred Lily or "Joss Flower"—growing in pebbles and water

The Great Chinese Sacred Lily is still one of the most popular Winter-blooming bulbs we have. They grow very easily and are sure to bloom quickly; they like moderate moisture and plenty of light and heat. They grow nicely in pots of ordinary soil, but the easiest and quickest way to bloom them is in a bowl of water with a few pebbles to hold the bulbs in place. The bulbs are large, and each one sends up from five to twelve flower stems bearing great clusters of large pure white wax-like blossoms, with yellow centers and deliciously fragrant. Some are single and others double, but all equally beautiful, and they bloom so quickly and abundantly they are in great demand everywhere. They continue to bloom a long time, and by planting at different times, a few weeks apart, you can have flowers all Winter and Spring. Ours are the Genuine Chinese Sacred Lily grown in China.

WHAT FLOWER CAN COMPARE WITH THE STately LILY?

The True Bermuda Easter Lily

(LILIUM HARRISII)

Bermuda Easter Lily

This is one of the grandest and most beautiful lilies ever seen, and the best of all for Winter flowering in pots; it grows easily and is sure to bloom. The flowers are pure snow-white, very large and fragrant, and borne in splendid clusters, six or eight at a time. Vast numbers of these splendid lilies are grown for church and house decorations every year. Plant in a pot or box which is at least six inches deep and well drained; good turfy soil with a little old, well-rotted manure is best; the bulb should be covered about one inch deep; firm the earth well around it, water thoroughly and set away in a cool place three weeks or more till the roots begin to start, then bring to the light—the window of an ordinary living room is about right. They require moderate heat, with plenty of sunshine and water, and should bloom about three months from time of planting. Our Easter Lily Bulbs are of the very best quality and warranted to give satisfaction. We offer them in 3 sizes. *Ready in August.*

SWEET LILY OF THE VALLEY

Its beautiful sprays of lovely pure white bell-shaped flowers are always greatly admired. It is perfectly hardy, does not object to shade and will do well in any odd corner you happen to have, but will of course give finer flowers and more of them when given good, well-prepared ground, and partial shade; they are entirely hardy and will increase in number and beauty from year to year. In house or conservatory a half dozen roots in a 4-inch pot, kept cool awhile and then given light and moisture, will soon produce an abundance of lovely fragrant flowers. Price, strong flowering roots, delivered free in U. S., 3 for 15c.; 12 for 50c.; 25 roots, 1 bundle, 75c.; 100 roots, \$2.00.

NOTE—LILY OF THE VALLEY is one of the most useful pure white flowers for winter forcing and is grown in immense quantities in all the larger cities for the Holiday Trade. They last a long time when cut, and are particularly beautiful when colonized in large patches in partially shaded places about the lawn, and being entirely hardy, will mostly take care of themselves without much attention. (Ready in November.)

Amaryllis

Queen of Winter Flowering Bulbs

CULTURAL DIRECTIONS—Amaryllis require very little soil, therefore you should use pots a very little larger than the bulb and when planting leave the neck of the bulb exposed. Do not repot until there is danger of the bulb bursting the pot and then give just one size larger. Amaryllis bloom all the better for being cramped. When growing well and bloom is forming it helps the flower if you water with liquid manure or weak Bon Arbor.

Amaryllis Halli (*Lycoris Squamigera*)—In the early Spring produces a crop of attractive green foliage. In July this ripens off and disappears. After resting a month, as if by magic the flower stalks spring from the ground to a height of 2 or 3 feet and bloom in umbels of eight or ten large lily-shaped flowers, each 3 to 4 inches across. Color a delicate lilac pink shaded with clear blue. Plant among the shrubbery or in the hardy border in Fall or Spring. Cover 4 inches. Price, 20c. each; 3 for 50c., postpaid.

ANEMONES (Hardy Wind Flowers)

The flower stalks grow 15 to 18 inches high, and the flowers open in succession for several weeks; the color is bright rich blue, very showy and attractive. Price, 25c. each; 3 for 65c., postpaid. Ready in November.

The plants should be up in two weeks. Remove the straw gradually, keep the bed moist and when seedlings are large enough, transplant to cold frame. When winter sets in cover the plants but be careful not to smother them and in spring when frost is out of the ground they can be set out in open border in good rich soil. Ornamental Ferns

Nephrolepis "ROOSEVELT"

NEW 1911. See cut

The Grandest Fern in Its Class Yet Introduced

In general characteristics this plant resembles the world-famous Boston Fern, but it makes a bushier and more attractive appearance as it produces many more fronds than the Boston. In the Roosevelt the pinnae are beautifully undulated, giving a pronounced wavy effect seen in no other fern, and as the plant ages, this charming peculiarity becomes more marked.

If planted in good loamy soil in which some sharp sand is mixed and kept in growing condition, a small plant will produce an effect like illustration in a short time.

Price, 50c. each, postpaid. Larger size, \$1.00 each, by express.

The Three Best Hardy Climbers

OUR STRONG 2-YEAR PLANTS IF SET OUT THIS FALL WILL GROW CANES FROM 10 TO 20 FEET NEXT SEASON

American Pillar Introduced by The Conard & Jones Company. A tremendous grower. Large single flowers of rich, rosy pink approaching brilliant carmine, just a glint of white in the center, and stamens yellow. But it is most charming because of its intense blush of loveliness that almost completely covers the foliage. Just blossoms—four to six layers deep, and arranged in 100 flowered clusters all over. We estimated certainly not less than 3000 on one young bush. The foliage is beautiful and furnishes the bush from the ground up. Without doubt this is the most valuable single pink climbing rose in existence.
